Education

Dhirubhai Ambani Institute of Information and Communication Technology

2024 – 2026

M.Sc. Information Technology **CPI: 7.23**

Gandhinagar, Gujarat

GLS University

2021 – 2024

Bachelor of Computer Applications **CGPA: 8.24**

Ahmedabad, Gujarat

Experience

Software Engineer Intern

Jan 2026 – Apr 2026

Oizom

Ahmedabad, India

- Built **Envizom**, a dual-engine SVG charting library utilizing **D3.js** in **TypeScript** for interactive client-side rendering, and a pure **Go** port of D3 for generating static server-side reports and exports.
- Architected a declarative, config-driven API that guarantees absolute pixel parity and mathematically identical SVG outputs across both the interactive frontend and the static Go backend using the exact same configuration.
- Implemented deterministic data-reduction and downsampling algorithms to maintain rendering performance and visual fidelity for massive time-series datasets.

Software Development Intern

Jul 2023 – Feb 2024

Inexture Solutions LLP

Ahmedabad, Gujarat

- Developed **SoleStore**, a full-stack e-commerce footwear platform as part of a 3-member team under industry mentorship.
- Conducted requirements gathering, system analysis, and designed UML diagrams for system architecture and workflows.
- Implemented product catalog, authentication, and order management modules following SDLC best practices.

Projects

Resume Ranker | *FastAPI, Python, Docker, LLMs*

- Engineered a stateless microservice that extracts and scores candidate resumes against job descriptions, eliminating black-box AI algorithms by producing side-by-side verbatim evidence quotes.
- Designed a deterministic, three-step LLM pipeline (JD extraction → resume extraction → scoring) enforcing strict JSON schema boundaries via **instructor** and **Pydantic**.
- Implemented robust PDF processing using **pdfplumber** to parse uploaded documents synchronously in-flight, entirely eliminating the need for persistent storage or caching.
- Containerized the service using Docker with a multi-stage **uv**-accelerated build, enforcing hard resource limits (1GB RAM, 1 CPU core) and anti-fingerprinting configurations.

DepCycle | *Python, AST, Graphviz*

- Developed a CLI utility for visualizing Python project dependencies and detecting circular architectural coupling.
- Implemented an AST-based parser to precisely extract import statements across entire codebases without executing them.
- Engineered a cycle detection engine using depth-first search to identify dependency loops, generating interactive maps in PNG, SVG, and HTML formats.

Placemate | *Django, REST Framework, PostgreSQL, Cloudinary*

- Engineered the backend for a campus recruitment platform using Django REST Framework, centralizing data management and automated workflows for students, companies, and placement officers.
- Implemented secure, stateless authentication using HTTP-only cookies and JWTs to prevent XSS attacks, alongside a robust Role-Based Access Control (RBAC) and object-level permissions system.
- Designed a standardized, globally consistent JSON response and exception handling architecture via custom BaseViewSets and middleware.

Technical Skills

Languages: C / C++, Go, Python

Frameworks: FastAPI, Django REST Framework

Cloud & Infra: AWS, Docker, Linux, Terraform

Databases: PostgreSQL, MySQL, Redis

Developer Tools: Git, GitHub Actions

Interests: Backend Engineering, Cloud Infrastructure, System Design
