EDUCATION

Dhirubhai Ambani Institute of Information and Communication Technology

2024 – 2026

M.Sc. Information Technology • GPA: 7.23/10 • Gandhinagar, Gujarat

GLS University

2021 – 2024

Bachelor of Computer Applications • GPA: 8.24/10 • Ahmedabad, Gujarat

EXPERIENCE

Software Intern — Oizom

Jan 2026 – Apr 2026

Ahmedabad, India

- Built a pure **Go** implementation of Envizom for server-side SVG report generation and exports, alongside the existing **TypeScript/D3.js** rendering engine.
- Designed a shared declarative rendering specification to maintain **pixel-level visual parity** between client-side TypeScript and server-side Go implementations.
- Implemented deterministic data-reduction and downsampling algorithms for large time-series datasets, and profiled rendering time and memory usage to identify performance bottlenecks.

PROJECTS

Resume Ranker *Python • Streamlit • gRPC • Protobuf • Docker • LLMs*

[Live](#)

- Built and deployed an AI-powered resume analysis platform that compares candidate resumes with job descriptions and produces structured, evidence-backed fit reports.
- Architected independent **Python** services with a **Streamlit** dashboard communicating with an asynchronous analysis engine through strongly typed **gRPC/Protobuf** contracts.
- Implemented provider-independent LLM integration, concurrent document processing, bounded execution, rate limiting, retries, cancellation handling, structured telemetry, and automated testing.

DepCycle *Python • Static Analysis • CLI*

[PyPI](#) [GitHub](#)

- Built and published a **Python CLI** for analyzing project dependencies, classifying local and external modules, and identifying circular architectural coupling.
- Implemented safe import discovery using Python's `ast` module, resolving absolute, relative, and dotted imports without executing application code.
- Generated interactive HTML dependency graphs and machine-readable **JSON/DOT** outputs for architecture exploration and automation.

Linux Server Baseline *Ansible • Ubuntu • Linux*

[GitHub](#)

- Built a modular **Ansible** infrastructure-as-code baseline for repeatable **Ubuntu** server provisioning, security hardening, and system maintenance.
- Automated least-privilege server access with dedicated **sysadmin**, **automation**, and non-privileged **deployer** identities, alongside hardened SSH, **firewalld**, and **Fail2ban**.
- Implemented reusable, idempotent security roles covering **Auditd**, persistent journald logging, kernel/network **sysctl** hardening, automatic security updates, **Chrony**, and system monitoring.

Placemate *Django • DRF • PostgreSQL • Cloudinary • Render*

[Live](#)

- Built a Django REST Framework backend for a centralized campus recruitment platform, supporting placement workflows and role-specific operations.
- Implemented secure JWT authentication with HTTP-only cookies, **RBAC**, and object-level permissions. Designed reusable middleware and BaseViewSet for standardized API responses and exception handling, then deployed with **PostgreSQL** and Cloudinary on Render.

TECHNICAL SKILLS

Languages: Python, Go

Backend: FastAPI, Django, Django REST Framework

Cloud & DevOps: Linux, Docker, AWS (EC2, S3, IAM), Terraform, Ansible, GitHub Actions

Databases & Tools: PostgreSQL, MySQL, Redis, Git
