EDUCATION

Dhirubhai Ambani Institute of Information and Communication Technology *2024 – 2026*
M.Sc. Information Technology • GPA: 7.23/10 • Gandhinagar, Gujarat

GLS University *2021 – 2024*
Bachelor of Computer Applications • GPA: 8.24/10 • Ahmedabad, Gujarat

EXPERIENCE

Software Intern — Oizom *Jan 2026 – Apr 2026*
Ahmedabad, India

- Built a production-ready **Go** renderer for Envizom, a **TypeScript/D3.js** charting library, generating server-side SVG and PNG exports for six chart types (line, bar, scatter, heatmap, whisker, wind rose).
- Designed a shared declarative rendering spec consumed by both the Go and TypeScript implementations, keeping output **visually identical** without duplicating chart logic.
- Built a deterministic data-reduction pipeline (LTTB downsampling, binning, top-N) that picks a render strategy per chart, handling large datasets.
- Used **pprof** profiling and **sync.Pool** buffer pooling to cut allocations, and rasterized PNGs in pure Go via resvg.

PROJECTS

Proofrun *Python · asyncio · Docker* *PyPI GitHub*

- Built and published **Proofrun** on PyPI, a self-hosted API monitor that verifies a complete user journey works (log in, reuse the token, fetch data), not just whether one endpoint returns 200.
- Defined workflows as declarative YAML in Git, with JSONPath value extraction between steps and status, latency, header, and JSON Schema assertions; runs stop at the first failure and name the exact step.
- Designed an **asyncio** daemon with per-scenario schedules, retries, and failure thresholds so webhook alerts fire only when health changes; config hot-reloads and keeps the last working version.
- Made it deployment-ready with env-var secrets, metrics, a non-root **Docker** image, and a hardened **systemd** unit, backed by tests and CI/CD with PyPI trusted publishing.

DepCycle *Python · AST · Static Analysis · Graphviz* *PyPI GitHub*

- Built and published a **Python CLI** that statically analyzes project dependencies, detects circular imports, and maps architectural coupling across codebases.
- Implemented AST-based import discovery and resolution for absolute, relative, and dotted imports without executing application code, ignoring type-checking blocks.
- Added graph filtering to classify local, standard-library, and third-party modules, with a CLI JSON inspection interface for querying specific module dependencies and cycles.
- Engineered multiple report generators (interactive HTML with D3/ELK, JSON, and Graphviz DOT), backed by a comprehensive test suite and automated releases via PyPI trusted publishing.

ResumeRanker *Python · Streamlit · gRPC · Docker* *Live GitHub*

- Built and deployed an evidence-based hiring intelligence tool that compares resumes with job descriptions and produces structured fit assessments with supporting evidence, skill gaps, and experience alignment.
- Architected a **Streamlit** dashboard over an independent analysis backend using typed **gRPC/Protobuf** contracts, with a Caddy reverse proxy for secure public routing.
- Structured the analysis pipeline around modular extraction, requirement matching, scoring, and evidence generation, keeping the service extensible and independently testable.
- Containerized the full stack with **Docker Compose** and enforced code quality.

SKILLS

Languages: Python, Go, SQL
Backend: FastAPI, Django, Django REST Framework, REST APIs, gRPC, Protobuf
Databases: PostgreSQL, MySQL, Redis
Infrastructure: Linux, Docker, AWS (EC2, S3, IAM), OCI, Terraform, Ansible, GitHub Actions
