

Kishan Thanki

Backend Engineer (Go & Python) - working across DevOps & AI

[Email](#) | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

EDUCATION

Dhirubhai Ambani Institute of Information and Communication Technology

2024 – 2026

M.Sc. Information Technology • GPA: 7.23/10 • Gandhinagar, Gujarat

GLS University

2021 – 2024

Bachelor of Computer Applications • GPA: 8.24/10 • Ahmedabad, Gujarat

EXPERIENCE

Software Engineer Intern — Oizom

Jan 2026 – Apr 2026

Ahmedabad, India

- Built **Envizom**, a dual-engine SVG charting library using **D3.js** and **TypeScript** for interactive client-side visualizations, alongside a pure **Go** implementation for generating static server-side reports and exports.
- Designed a declarative, configuration-driven rendering API that ensured pixel-perfect SVG parity across the TypeScript frontend and Go backend using a shared rendering specification.
- Engineered deterministic downsampling and data-reduction algorithms to efficiently render large time-series datasets while preserving visual fidelity and responsiveness.

PROJECTS

Resume Ranker *Python • Streamlit • gRPC • Protobuf • Docker • LLMs*

[Live](#)

- Built an AI-powered candidate matching product that helps hiring teams compare resumes with job descriptions and identify evidence-backed matches across skills, experience, education, and projects.
- Designed an evidence-grounded analysis workflow that links requirements and candidate claims to exact source text, producing transparent match insights instead of unsupported LLM judgments.
- Architected a distributed product experience with a **Streamlit** dashboard communicating with a dedicated **Python** analysis engine through strongly typed **gRPC** and **Protobuf** contracts.
- Implemented concurrent PDF processing, parallel job-description and resume extraction, retry and rate-limit handling, structured token telemetry, and schema-validated LLM responses with **Instructor** and **Pydantic**.

DepCycle *Python • Static Analysis • CLI*

[PyPI](#) [GitHub](#)

- Built a Python CLI that maps project dependencies, classifies local and external modules, and identifies circular architectural coupling.
- Implemented safe import discovery with Python's `ast` module, resolving absolute, relative, and dotted imports without executing application code.
- Generated interactive HTML reports with search, zoom, dependency highlighting, and cycle paths, alongside machine-readable JSON and DOT output for automation and further visualization.

Placemate *Django • DRF • PostgreSQL • Cloudinary • Render*

[Live](#)

- Built a scalable backend for a centralized campus recruitment platform using Django REST Framework, automating campus placement workflows.
- Implemented secure JWT authentication with HTTP-only cookies, Role-Based Access Control (RBAC), and object-level permissions to enforce fine-grained authorization while mitigating XSS risks.
- Designed reusable middleware and BaseViewSets to standardize API responses, centralize exception handling, and simplify endpoint development.
- Deployed the backend on Render, configuring PostgreSQL, environment management, and Cloudinary integration for scalable media storage.

TECHNICAL SKILLS

Languages: Go, Python, SQL

Frameworks: FastAPI, Django REST Framework

Cloud & DevOps: Linux, Docker, AWS (EC2, S3, IAM), Oracle Cloud

Databases: PostgreSQL, MySQL, Redis

Tools: Git, GitHub Actions, Terraform
