EDUCATION

Dhirubhai Ambani Institute of Information and Communication Technology

2024 – 2026

M.Sc. Information Technology • GPA: 7.23/10 • Gandhinagar, Gujarat

GLS University

2021 – 2024

Bachelor of Computer Applications • GPA: 8.24/10 • Ahmedabad, Gujarat

EXPERIENCE

Software Intern — Oizom

Jan 2026 – Apr 2026

Ahmedabad, India

- Built a production-ready **Go** implementation of Envizom for server-side SVG report generation and exports, complementing the existing **TypeScript/D3.js** rendering engine.
- Designed a shared declarative rendering specification to achieve **pixel-level visual parity** between client-side TypeScript and server-side Go renderers.
- Implemented deterministic data-reduction and downsampling algorithms for large time-series datasets, and profiled rendering time and memory usage to identify performance bottlenecks.

PROJECTS

Resume Ranker *Python • Streamlit • gRPC • Protobuf • Docker • LLMs*

[Live](#)

- Built and deployed an AI-powered resume analysis platform that compares candidate resumes with job descriptions and generates structured, evidence-backed fit reports.
- Architected independent **Python** services with a **Streamlit** interface communicating with an asynchronous analysis engine through strongly typed **gRPC/Protobuf** contracts.
- Implemented concurrent document processing, bounded execution, rate limiting, retries, cancellation handling, structured telemetry, automated testing, and LLM-based analysis.

DepCycle *Python • AST • Static Analysis • CLI*

[PyPI](#) [GitHub](#)

- Built and published a **Python CLI** for analyzing project dependencies and identifying circular dependencies and architectural coupling.
- Implemented safe import discovery using Python's `ast` module, resolving absolute, relative, and dotted imports without executing application code.
- Generated interactive HTML dependency graphs and machine-readable **JSON/DOT** outputs for architecture analysis and automation.

Linux Server Baseline *Ansible • Ubuntu • Linux • Security*

[GitHub](#)

- Built a modular, cloud-provider-agnostic **Ansible** infrastructure baseline for repeatable **Ubuntu** server provisioning, security hardening, and maintenance.
- Automated server administration through reusable roles for **SSH hardening**, **firewalld**, Fail2ban, persistent journald logging, Auditd, Chrony, swap, system statistics, and automatic security updates.
- Structured deployment with inventories, host/group variables, pinned Ansible collections, idempotent roles, and **check/diff** workflows for safer infrastructure changes.

Placemate *Django • DRF • PostgreSQL • Cloudinary • Render*

[Live](#)

- Built a **Django REST Framework** backend for a centralized campus recruitment platform supporting placement workflows and role-specific operations.
- Implemented JWT authentication with HTTP-only cookies, **RBAC**, and object-level permissions, with reusable middleware and BaseViewSet for consistent API responses and exception handling.
- Deployed the application with **PostgreSQL** and Cloudinary on Render, integrating the backend with the full-stack application.

TECHNICAL SKILLS

Languages: Python, Go

Backend: FastAPI, Django, Django REST Framework, gRPC, Protobuf

Cloud & DevOps: Linux, Docker, AWS (EC2, S3, IAM), Terraform, Ansible, GitHub Actions

AI & Data: LLM Integration, Prompt Engineering, PostgreSQL, MySQL, Redis
